

## **CV di Maria Giuseppina Bisogni**

(2014- ad oggi) Professore associato di ruolo, Dipartimento di Fisica, Univ. di Pisa  
(2002- ad oggi) Incaricato di ricerca INFN, INFN sezione di Pisa  
(2002-2014) Ricercatore di ruolo, Dipartimento di Fisica, Univ. di Pisa  
(2001-2002) Post-Doc, Dipartimento di Fisica, Univ. di Pisa  
(1999-2000) Specialista in Fisica Medica, Scuola di Specializzazione in Fisica Medica, Univ. di Pisa  
(1996-1998) Dottorato di Ricerca in Fisica, Dipartimento di Fisica, Univ. di Pisa  
(1994) Laurea in Fisica, Votazione finale: "110/110 cum laude", Dipartimento di Fisica, Univ. Di Pisa

L'attività di ricerca di Maria Giuseppina Bisogni e' caratterizzata dallo studio di rivelatori a stato solido e la loro applicazione nella diagnostica per immagini, in particolare alla mammografia digitale e alla tomografia ad emissione di positroni per la verifica dei trattamenti in adroterapia. Negli anni 1994-2000 la sua attività di ricerca è stata focalizzata principalmente sullo sviluppo e caratterizzazione di rivelatori a semiconduttore (pixel e microtrisce) per la radiografia digitale. Negli anni 2001 - 2005 Bisogni ha partecipato attivamente al progetto "Breast Cancer Imaging integrato" (IMI), il programma di ricerca e formazione finanziata dal MURST (ora Ministero della Pubblica Istruzione), sotto gli auspici della legge 46/82 art. 10. La ricerca aveva come obiettivo principale la realizzazione di sistemi innovativi per imaging morfologico e funzionale per lo screening, la diagnosi e il follow-up delle patologie tumorali del seno.

Dal 2006 Bisogni ha iniziato una ricerca volta allo sviluppo e all'applicazione di un nuovo fotorivelatore per imaging medicale, il fotomoltiplicatore al Silicio (SiPM). Dopo aver preso parte a questo progetto sin dalle prime fasi, la candidata ha partecipato attivamente allo sviluppo e la sperimentazione di sensori SiPM e coordinato nel corso degli anni il lavoro di un gruppo di giovani ricercatori.

Il risultato più importante ottenuto in questa ricerca è stato lo sviluppo di moduli di rivelazione innovativi (progetto INFN 4DMPET di cui il candidato era investigatore principale negli anni 2011-2013) costituiti da cristalli scintillanti letti da matrici SiPM ed elettronica integrata. Versioni opportunamente adattate di questi moduli vengono adesso utilizzate in uno scanner PET-MR dedicato alle ricerche di malattie psichiatriche (FP7 progetto TRIMAGE) e nel sistema PET INSIDE per verificare la qualità dei trattamenti utilizzati nel adroterapia cancro. Maria Giuseppina Bisogni e' coordinatore nazionale del progetto INSIDE (MIUR PRIN2010-2011 PN . 2010P98A75) che ha costruito lo scanner PET INSIDE, ora in funzione presso il Centro Nazionale di Adroterapia Oncologica (CNAO), la più grande struttura di adroterapia in Italia.

Come spin-off del progetto TRIMAGE, Bisogni ha proposto e ora coordina per l'Università di Pisa un progetto (NEOLITE, finanziato da fondi regionali POR FESR 2014-2020) per lo sviluppo di alimentatori innovativi in grado di operare in campi magnetici di uno scanner MR (fino a 7 T). Il progetto è svolto in collaborazione con CAEN SpA e AGE Scientific, due PMI toscane attive nel campo dell'elettronica e della strumentazione scientifica.

### *Principali Progetti finanziati*

**2016 2017 NEOLITE Nuove tecnologie elettroniche di alimentazione in ambiente ostile (POR FESR 2014 – 2020 BANDO 2: PROGETTI DI RICERCA E SVILUPPO DELLE PMI FASE 2, 1.88 M€)**  
project leader: CAEN Spa

Responsabile scientifico Uni Pisa: Maria Giuseppina Bisogni

2013-2016 INSIDE Innovative solutions for Dosimetry in Hadrontherapy (MIUR PRIN2010-2011, PN 2010P98A75, 1M€)

Collaboration: Uni Pisa, Uni Torino, Politecnico Bari, Uni Roma La Sapienza, INFN

Coordinatore nazionale: Maria Giuseppina Bisogni

2011-2013 4D-MPET Four Dimension Magnetic Compatible PET module (INFN project funded  $\cong$  150k€ )

Collaboration: INFN of Pisa, Bari, Perugia, Torino

Responsabile nazionale: Maria Giuseppina Bisogni

# CURRICULUM VITAE

## PERSONAL INFORMATION

Name

**AMATO ANTONINO SALVATORE**

City of residence

Paternò (CT) - Italy

Office phone

+39 095 542361

E-mail

[amato@lns.infn.it](mailto:amato@lns.infn.it)

Nationality

Italian

Year of birth

1961

## WORK EXPERIENCE

• Dates

From 1984 to present

• Name and address of employer

**INFN – Laboratori Nazionali del Sud (LNS)**

Via Santa Sofia n.62 – 95123 Catania - Italy

• Position

CTER (Collaboratore Tecnico Ente di Ricerca) – Level IV

• Main activities and responsibilities

From 2012 to present: responsible of the "Electronics, Diagnostics and Automations (EDA)" group, belonging to the Service of "New Technologies for Accelerators"

## AREAS OF EXPERTISE

- Electronics for the remote control of the LNS Superconducting Cyclotron and beam transport lines
- Electronics for beam diagnostics and high speed signals
- Diagnostic systems for a proton beam used in medical application
- Beam diagnostic for laser-driven ion beams
- Accurate measurements of low level DC current
- Quench detector system of the LNS Superconducting Cyclotron
- High voltage and high current power supplies
- Magnetic field measurement systems
- Electromagnetic compatibility

## EDUCATION

• Dates

From 1974 to 1979

• Name and type of institute

State Professional Institute “Enrico Fermi” of Catania (Italy)

• Title of qualification awarded

Technician of Electrical and Electronic Industries

• Marks obtained

60 / 60

<b>SPOKEN LANGUAGES</b>	
Mother tongue	Italian
Other languages	<ul style="list-style-type: none"> <li>• English (fluent)</li> <li>• Russian (low intermediate - ниже среднего уровня)</li> </ul>
<b>MAIN ACTIVITY</b>	
• Accelerators Division	Deals with the ordinary maintenance and upgrading operations of the control systems for both the LNS superconducting cyclotron and the LNS beam transport lines.
• ELIMED project	Participation in the design and construction of the remote control, beam diagnostics and dosimetry systems, for the ELIMED beamline that will be installed in December 2017 at the ELI-Beamlines (Extreme Light Infrastructure Beamlines) facility in Prague.
• CATANA facility	Deals with the maintenance of the beam diagnostics, interlock and dosimetry systems, which are operating inside the proton therapy room dedicated for the treatment of ocular tumors.
• MAGNEX spectrometer	Deals with the maintenance of the two main power supplies 245_kW each.
<b>HISTORY</b>	
• Superconducted Cyclotron	<p>From middle of 1984 up to 1989 I worked in Milan for the construction of the Superconducted Cyclotron. In this period I joined the Computer Control group with the task of design and construct the: magnetic field mapping system; main console and its distributed control system; computer automation for the vacuum system.</p> <p>With the arriving of the Superconducted Cyclotron in Catania (1990), I was responsible of :</p> <ol style="list-style-type: none"> <li>1) the TPS, which is a dedicated control station for the monitoring of all "Temperatures, Pressures and Stresses" in the different points of the cryostat ;</li> <li>2) "Quench Detection System" and "Interlocks System" which together take care for the safety of the two superconducting coils ;</li> <li>3) Beam diagnostics for the accelerating chamber.</li> </ol> <p>The quality of the work that has been done was proved by the fact that in December 1994 was extracted the first ion beam.</p>
• LNS Beam Trasport Lines	In 1994 I started to work for the construction of the computer control system devoted for the LNS beam transport lines. During this year I designed all front-end electronics for the readout of beam diagnostic devices, such as Beam Profile Monitors (based on two scanning wires) and Faraday-Cups. The quality of the work that was done in 1994 was proved by the fact that all systems were able to measure DC currents down to 1pA within a bandwidth of 100_Hz.
• CATANA project	In 1996 started my collaboration with the working group who was in charge to build up, at LNS, a 70 MeV proton-therapy facility for the treatments of eye tumour. In this context I developed all low level electronics necessary for the beam diagnostics, dosimetry system included, to be installed inside the proton-therapy room. The quality of the work that has been done during that period is still proved by the fact that more than 350 patients have been successful treated from February 2002 up to now.
• EXCYT project	<p>From 2003 to 2009 I worked for this project, which goal was the production and acceleration of radioactive ion beams by means of a primary beam (accelerated by the LNS superconducting cyclotron) and a target-ion source located inside a high voltage platform. In this context I worked for: 1) the purchase of all power supplies necessary for the magnetic and electrostatic elements installed along the EXCYT beam lines; 2) the computer control; 3) the beam diagnostics.</p> <p>In July 2006 the first radioactive ion beam (<math>^{8}\text{Li}</math>) was delivered to experimental apparatus.</p>

<ul style="list-style-type: none"> <li>• Other activities</li> </ul>	<p>My knowledge and skills acquired in the field of low-level current measurements allowed me to contributing to some of the research projects financed by INFN Group V. Among these I would like to mention in chronological order: MINIT, CASCADE, SURADDA, LASCAR, NASTRI and DISCOLI.</p> <p>Thanks to these skills, in December 2008 I had the pleasure to be invited by Dr. Tianjue Zhang, head of BRIF Technology Division of the China Institute of Atomic Energy in Beijing, to hold a seminar, at their headquarters, on "Low-level dc current measurements and their applications in beam diagnostic at INFN-LNS".</p>

# **Short Curriculum Vitae**

## **Luigi G. Celona**

Dr. Celona received the degree in Electronic Engineering from the University of Catania, Italy in 1995 and he joined the Istituto Nazionale di Fisica Nucleare in 1996, at the Laboratori Nazionali del Sud in Catania (INFN-LNS), becoming Technological Research Physicist in 1998 and Principal Technological Research Physicist in 2006. His main field of activity concerns all over the different aspects regarding the production of singly and highly charged beams together with their acceleration. In particular, he proposed different innovative concepts for the development of ECR (electron cyclotron resonance) ion sources, actively working on the construction and development of many different ECR and microwave ion sources. This activity has taken to the development of the so-called "3rd generation ECRIS". In this field Dr. Celona has carried out various experiments at the major facilities worldwide (LBNL, GSI, MPI, MSU, etc).

He has also designed and built other types of ion and plasma sources, as the microwave discharge ion sources for high efficiency ionization of recoils (MIDAS) and for intense monocharged beam production and laser ion sources (PS-ESS, VIS and TRIPS). He also worked on the development of the K-800 Superconducting Cyclotron bunching system and on the design and construction of the EXCYT radioactive beam facility at INFN-LNS.

### **Record of accomplishment**

- **Member of INFN Machine Advisory Committee;**
- **AISHa project team leader** (PO FESR Sicily) since 01/2013;
- **Leader** of the Work Unit regarding the high intensity **ESS proton source and its LEBT** since 01/2011;
- **Leader of the work package regarding the design of new components of accelerators for hadrotherapy (WP8) inside the RDH experiment** supported by the 5<sup>th</sup> Scientific Committee of INFN since 01/2013;
- **Technological and scientific coordination of the EXCYT facility** since 01/2012;
- **Member of the SPES referee committee** since 01/2010;
- **Member of the EMILIE referee committee** since 01/2012;
- **Chairman of the International Workshop on ECR Ion Sources** (to be held in Catania on September 2018);
- **Co-chairman of the International Conference on Ion Sources** and member of the Scientific Advisory Committee (2009-2011);
- **Leader of the UTOPIA experiment** (electromagnetic wave interaction with plasma and generation of plasma waves in compact size machines) supported by the 5<sup>th</sup> Scientific Committee of INFN (2012);
- **Coordinator of the HELIOS experiment** (generation of hot electron layers in high density plasmas of ECR Ion Sources under different values of power and frequencies of the pumping electromagnetic wave) for INFN-LNS (2009-2011);
- **Coordinator of the INES experiment** (innovative methods of electromagnetic waves coupling to plasmas of ECR Ion Sources) for INFN-LNS (2005-2008);
- **Technical ccoordinator for the final assembling, the commissioning and the first experiments of the EXCYT facility at INFN-LNS (2004-2007);**
- **Representative of the LNS Technological Research personnel for two terms** from (09/2002 to 09/2008).

**Articles published in peer reviewed journals: >200**
